SUMMARY

Product Manager with **6 years** building **blockchain and AI products** from zero to adoption. I specialize in **early-stage product discovery**: talking to customers, validating hypotheses, and shipping scrappy MVPs that solve real problems. Built **Yap Market from concept to 15K+ users** through customer interviews and design partner validation. Won **4 hackathons** by rapidly prototyping and testing ideas with real users. I thrive in ambiguity and move fast with small teams.

Focus areas: *0→1 product development, customer discovery, AI agents, DeFi infrastructure, rapid prototyping, design partner validation*

PROFESSIONAL EXPERIENCE

Founding Product Lead, Yap Market — Dubai, UAE

02/2025 - Present

- Built **Yap Market from zero to 15K+ users** through customer discovery, rapid iteration, and design partner validation with 5 initial brand partners
- Conducted **60+ customer interviews** with brands and influencers to validate reward distribution problem and define product wedge
- Shipped **MVP in 4 months** with small engineering team, iterated based on real user behavior and feedback loops
- Built **AI-powered content and sentiment analysis pipeline** using OpenAI APIs to classify influencer performance and optimize reward allocation across 150+ brands
- Developed **attribution system** that indexes distribution networks to track campaign ROI, processing data from 50+ sources
- Drive on-chain reward distribution of **\$400K+ across campaigns** through validated allocation mechanisms

Senior Product Manager, BQ Labs — Dubai, UAE

03/2024 - 01/2025

- Led cross-functional team of engineers and MLEs to build **custom AI agents** for financial risk analysis and predictive insights, increasing engaged sessions by **40% in three months**
- Shipped **Bitcoin-focused DeFi risk platform** from concept to Devnet and won **first place at Bitcoin Olympics 2024 with a \$34K prize**
- Designed and deployed **AI-powered risk assessment models** using real-time data processing and pattern recognition to identify portfolio vulnerabilities and market anomalies
- Secured **\$200K in grants** and aligned with 45+ BTC ecosystem projects through partnership LOIs

Product Manager, CBA Technology Solutions — Dubai, UAE

11/2023 - 03/2024

- Implemented **GPT-powered analytics platform** that expanded qualified user engagement by **300%**, leveraging generative AI for personalized insights
- Led development of **AI-driven onboarding optimization system** that helped scale staking platform to **\$12M TVL in five months**

- Launched a **points system** that increased DAU by **150 percent** through gamification and AI-powered recommendations
- Led **cross-functional delivery** with clear OKRs across engineering, design, and growth teams

Product Engineer, Tech Alchemy Ltd — Remote, India

01/2022 - 11/2023

- Shipped **Tamadoge from concept to launch** with **\$15M in presales** and strong community traction
- Owned **NFT strategy** from mint to marketplace, enabling seamless asset ownership and secondary trading
- Delivered an **account abstraction non-custodial wallet** and a **gas-efficient DEX** based on Uniswap V2 and V3 logic

RPA Developer and QA, American Technology Consulting — Remote, India

11/2020 - 02/2022

- Built **RPA solutions with UiPath**, automating **20+ banking processes** and boosting efficiency by **30%**
- Designed **web scraping tools** to gather data from **50+ sources**, enhancing product team insights
- Executed rigorous testing strategies, slashing production bugs by **40%**

VENTURES & SIDE PROJECTS

Agentic DeFi Assistant *(Hackathon Winner - 0→1)*

Built **text-to-transaction AI agent** allowing users to execute DeFi operations (swaps, bridging, staking) through natural language input

- Validated concept with **20+ DeFi power users** through interviews to understand workflow pain points
- Tested MVP with **5 design partners** who provided feedback on intent parsing and transaction flows
- Won **AI Agents Hackathon 2024 (\$25K prize)** for novel approach to wallet interaction
- **Tech stack:** *LangGraph, wallet integration, transaction simulation, intent recognition*

Agentic Marketing Platform *(Prototype)*

Developed **AI tool for automated content generation** using Stable Diffusion and video generation models

- Conducted customer discovery with **10+ marketing teams** to understand content workflow bottlenecks
- Built prototype and tested with **2 design partners**, measuring **70% time reduction** in content creation
- Key learning: Users prioritized **quality control and brand consistency** over pure speed
- **Tech stack:** *Stable Diffusion, video models, content pipeline automation*

Real Estate AI Agent *(Voice-based Prototype)*

Voice AI agent for **automated client qualification** using voice synthesis (ElevenLabs, HeyGen)

- Built based on conversations with **3 real estate agencies** to understand lead qualification challenges
- Tested call flows with **100+ simulated inquiries** to validate conversation logic
- Outcome: Proven technical concept but struggled to find **paying customers** willing to replace human touch
- **Key learning:** Enterprise sales cycles require different validation approach than consumer products

AWARDS & RECOGNITION

- **First Place - AI Agents Hackathon 2024 (\$25K prize)**
- **First Place - Bitcoin Olympics 2024, BTCFi solution with AI enhancements (\$34K prize)**
- **Four-time global hackathon winner** with finalist placements at ETHGlobal and Fantom
- **Keynote Speaker - BTCFi Conference 2024, Dubai**
- Published technical litepaper on BQ Labs architecture

EDUCATION

Bachelor of Engineering in Computer Science

Tamilnadu College of Engineering | 06/2016 - 04/2020

Specialization: Blockchain and Distributed Ledger Technology (DLT)

Notable: Finalist, National Smart India Hackathon

SKILLS

Product Discovery & Validation: Customer interviews (conducted **200+ in career**), hypothesis validation, design partner management, early GTM strategy, rapid prototyping, pivot decision-making, user research

Product Management: Product strategy, roadmaps, OKRs, cross-functional team leadership, stakeholder management, experiment design, metrics definition

AI & Agents: AI agent development (LangGraph, custom workflows), LLM integration (OpenAI APIs), prompt engineering, intent-based systems, agentic automation

Blockchain & DeFi: Wallets, DEX mechanics, AMMs, staking, account abstraction (ERC-4337), on-chain attribution, DeFi protocols, tokenomics

Technical: Python, JavaScript, rapid prototyping tools (Cursor, Lovable, V0, Replit), Figma, Jira, API integration, data pipelines

CERTIFICATIONS

- **LLMs and AI Automation**
- **AI Agents Foundations**
- **Product Management**
- **Crypto Token Economics**

Currently Learning: *Advanced prompt engineering, agentic workflow design, x402 protocol*
